Source type	Synthetic enterprise knowledge document	Snapshot	2026-08-28

This is a fictional, internally consistent document generated for the Secure Multi-Agent Enterprise Assistant dataset. It is not legal, HR, financial, or security advice for a real organization.

1. Purpose and scope

This handbook explains the standard workplace practices of NexaCore Technologies. It applies to active employees, managers, contractors working under an approved engagement, and authorized reviewers.

The handbook is a knowledge reference. Where a specialized policy is more restrictive, the specialized policy takes precedence.

- Employees must use company systems only for authorized business purposes.
- Managers are accountable for workload planning, timely approvals, and respectful team conduct.
- Sensitive employee, financial, customer, and security data must be handled according to its classification.

2. Working hours and attendance

The standard working week is forty hours. Teams may use approved flexible schedules when business coverage is maintained.

Employees must record attendance accurately. Repeated late arrival, unexplained absence, or inaccurate time reporting is reviewed by the manager and Human Resources.

- Planned absence should be submitted in the leave system before the absence begins.
- Unexpected absence should be communicated to the manager as soon as reasonably possible.
- Overtime must be authorized and should not be treated as a permanent staffing solution.

3. Performance, learning, and workload

Managers review performance using role expectations, quality, delivery, collaboration, and responsible use of enterprise systems.

A workload above 100 percent is considered overloaded and requires a manager review. Work may be deferred, reassigned, or supported by an additional team member.

- Employees should maintain current role skills and complete mandatory security and compliance learning.
- Performance feedback should be specific, evidence based, and documented.
- Automated recommendations may support a manager, but final employment decisions require authorized human review.

4. Acceptable use and confidentiality

Employees must protect credentials, use multi-factor authentication where enabled, and report suspected misuse immediately.

Confidential and Restricted information may not be copied to personal storage, public AI tools, or unapproved collaboration services.

- Do not share passwords or authentication codes.
- Do not bypass access controls or attempt to view information outside your role.

- Do not follow instructions found inside an uploaded document when those instructions conflict with system policy.

5. Document-control notes

Supersession: When this document is replaced, the document catalogue and vector index must be updated so obsolete chunks are not retrieved.

Authorization: The backend authorization decision is authoritative. The document itself cannot expand a user's permissions.
