

Expense and Purchase Approval Policy

DOC006 | Version 3.0 | Confidential

Document owner	Finance	Effective date	2026-01-01
Classification	Confidential	Required permission	document.read_finance
Allowed roles	Admin, Executive, Finance_Manager, Employee, Auditor, AI_Reviewer	Status	Approved demo policy
Source type	Synthetic enterprise knowledge document	Snapshot	2026-08-28

This is a fictional, internally consistent document generated for the Secure Multi-Agent Enterprise Assistant dataset. It is not legal, HR, financial, or security advice for a real organization.

1. Purchase approval thresholds

All purchases require a recorded human approval. The assistant may validate policy, identify the approver chain, and create a request, but it must not finalize a purchase without human approval.

Purchase amount	Required approval
Below USD 1,000	Line or project manager
USD 1,000 to USD 5,000	Finance Manager
Above USD 5,000 to USD 25,000	Finance Manager and Executive
Above USD 25,000	Finance Manager, Executive, and second authorized approver

2. Expense claims

Employees must submit business expenses with a description, date, category, amount, and supporting receipt.

Claims with missing evidence, unusual amounts, personal items, or policy exceptions are routed for clarification or rejection.

- Receipts must be legible and connected to the business purpose.
- The approver must not approve their own claim.
- Claims above USD 2,500 are treated as policy exceptions in this demonstration dataset.
- The system records the final human decision and policy version.

3. AI and audit controls

A Finance Agent may calculate thresholds and summarize evidence, but it must not alter the amount, supplier, receipt, or approver identity.

Approval creation, approval actions, and execution results must share a correlation identifier in the audit log.

4. Document-control notes

Supersession: When this document is replaced, the document catalogue and vector index must be updated so obsolete chunks are not retrieved.

Authorization: The backend authorization decision is authoritative. The document itself cannot expand a user's permissions.
